MONOTYPE CATALOG & SPECIMEN BOOK
The Monotype Keyboard, which punches a paper ribbon that governs the caster so that a text may be cast to your specifications, and ready for the press.

The *Welliver* is a Mac-driven digital interface that now runs the composition caster. Your text file is prepared digitally then the Mac hooked up to a circuit board runs valves regulating the air used to control the caster via the "spaghetti" you see above right, top. Below right are the solenoid valves & the circuit board below them.
Swamp Press Type Catalog and Specimen Book

• NOTE • *No catalog is ever complete.* If you do not see what you want, INQUIRE. Sometimes I can borrow matrices for sizes and faces not listed here. • The specimens SOMETIMES show characters which are NOT AVAILABLE. If you have specific requirements, let me know. • If you are MIXING new type into your drawers *send me a cap* H so that my type will align with yours. • "COMPOSITION" means machine typesetting can be done to your specifications. Your manuscript can be set with spacing, justification etc. & ready for the press. When done with your project, you may return the metal for a REFUND of the metal charge or you may *keep some or all of the type* to put into cases for future hand setting. • We now have the WELLIVER digital system for driving the caster, thus eliminating the keyboard. DISPLAY means that one character is cast until it is done and then a new character is cast, and so on, allowing only fonts, sorts and hand composition to be available. IN GENERAL machine composition runs 6 to 12 point although some faces have comp up to 24 point. Many of the classic and newer designs run "small comp" to 14 point and "large comp" to 24 point. But in general 14 to 72 point is hand comp. • Full page SPECIMEN SHEETS, showing particular faces in their many sizes and variations are available in pdf or printed versions. • Separate catalogs of our vast holding of ORNAMENTS and SIGNS are available.

Ed Rayher

This book is divided into four sections:

I. Serif
II. Sans Serif & Scripts
III. Gothics
IV. Unique & Foreign Faces

End Matter: Font Schemes & Misc. Info
Faces are shown in alphabetical order within each section.

---

†Note: There were two companies making Monotype machines and matrices: the Lanston Monotype Machine Company based in Philadelphia, and The Monotype Corporation Limited, based in England. Although American and English mats and machines were engineered to be incompatible, we can work around that and cast from either type of matrix. Lanston comp mats have a 0.030'' drive, English Monotype 0.050''.

BAKER

BY RUSSELL MARET

An original font designed by Russell Maret, & cast from matrices engraved at Swamp Press. The design is based on letter carvings on the Tomb of Eurysaces the Baker (ca. 50-20BC) outside Rome, Italy.

DISPLAY: 24#1= 20 point   [†]Electroplated Thompson Mats

[††]In the parens is listed the foundries that made the mats and in this case the specimen is taken from Typefounders of Chicago. To make matters more complicated my matrices were probably made by the Thompson company. These mats were made by electro-depositing copper into a brass blank into which was inserted a piece of lead type. Once the electroplating was complete, the type was removed and the mat machined, making it was ready for casting. This method was used both legitimately (most Lanston Monotype display mats were made this way) and as a way to pirate designs from other foundries. Composition and English Display mats were made by plunging a hardened steel punch into brass, bronze or aluminum.

Bodoni Light #175

Bodoni was created by Giambattista Bodoni c. 1760-1810 and was immensely popular up to the 1850's. Morris Fuller Benton of ATF popularized revised versions 1908-1915, and Bauer Bodoni, c. 1926 by Heinrich Jost is yet another updated version.

The Monotype cellular composition matrix has a punched cavity at the top into which molten type metal is injected— which forms the printing surface of a piece of movable type. In the standard 15x15 matrix case 225 mats are arranged in 15 rows of 15 mats. Each row casts type with the same set width, thus in theory 15 set-sizes may be cast from one matrix case.

DISPLAY: Roman: 24, 30, 36, 36H4 *

* Lanston's "H4" designation stands for a "Titling" version, in other words there is no lower case or descender position, so the whole body is taken up with the capitals. Thus a 36H4 reads much larger than the body size of 36 point suggests, and a cap in 72 point regular would be much smaller in height.

Typical "flat mat" for display casting. Since it is hand-loaded into the caster (Monotype Orphan Annie, Type & Rule Caster, Thompson, English Monotype Supercaster or Lanston Giant Caster) only sorts casting is possible. When making up fonts each matrix is loaded and the appropriate number of casts performed, then the next matrix & etc. until enough type is made to hand-assemble into fonts. The comp caster can make fonts in a single run all on its own.

Display Matrix

Caledonia Bold (Linotype)*

A B C D E F G H I J K L M N O P Q R S T U V W X Y Z & $ 1 2 3 4 5 6 7 8 9 0 . , - ; : '' ! ? († ¶ * ‡ §

Special DISPLAY casting: 18 (18Δ445)

*Linotype and Intertype were competitors with Monotype and made slug-casting machines. With a special mold and holder normal hand-set type may be cast from these mats on the Thompson caster, although the process is very slow and of course machine composition is impossible on the Thompson.

Cameo (Ludlow #19)

R.H. Middleton circa1926. Perhaps one of his first designs for Ludlow.

Seems to be an open face for Caslon.

For Fine Contrast 59

24 Point Ludlow No. 19 Cameo, 12 to 72 Point

Special DISPLAY casting: Roman: 12, 14, 18, 24, 30*

*(Caps only)

Giant type. Note the two hollows inside the type body. Giant type has a depth of drive of 0.065'' in most cases, deeper than Lanston composition Monotype (0.030''), or English composition (0.050'') or Thompson / Lanston / English Display to 36 point: 0.050''. The ''depth of drive'' is the business end of the character that rises up from the body, and includes the face and beard.

Giant Caster Matrix

Caslon began in 1725 with William Caslon starting the Caslon Type
Foundry which endured for three generarions. The faces were based
on 17th century Dutch types. Versions of Caslon were introduced
in a specimen sheet in 1734. The US Constitution and Declaration of
Independence were both printed in Caslon.

[†] I know this is confusing, but Lanston called the font "English Caslon Old Style" and the face has nothing to do with English Monotype in England. By the way, operating out of London, Monotype Hot Metal is the successor of "The Monotype Corporation Limited" (aka English Monotype) and is still punching Monotype composition matrices up to 24 point.

THE ORIGINAL OLD CASLON
ON THE MONOTYPE
THIS NEW MONOTYPE CASLON (the No. 337 Series) is a faithful reproduction of a face that has steadfastly maintained its popularity in spite of defilement by designers who have distorted this beautiful old face to suit the so-called "standard line" and in other ways endeavored to "modernize" a classic.

WE confidently rest our typographic reputation upon this real Caslon, for, although these matrices have been made in the cellular sizes from 7 to 12 point, for use on a composing machine, surely there is nothing "machinery" about the face here shown; all the charm of the original hand-cut letters has been preserved.

CASLON should be set leaded, and therefore we have made the face with its distinctive long descenders; for those who must set this face solid, almost a desecration, we have provided, in the cellular point sizes, matrices for the shortened descenders, but these are much less stubby than the descenders of most of the modern adaptations of this face.

ONE other point should be noted; Caslon was made to be printed upon hand-made paper—there was no machine-finish in those good old days. We have not attempted the impossible, to make a face that would be Caslon under totally different printing conditions.

WE have two other Caslons, the Nos. 37 and 137E Series; therefore we have made this new-old Caslon for our own satisfaction and to delight those who love to mix type, paper and brains. To show the great difference that paper makes in this face we here print it both on antique and on coated paper. *In ordering, please be sure to specify whether you wish the long or the short descenders.*

A faithful reproduction of the real old Caslon Series cut in the year 1720, by William Caslon, the first, of London

Fonts of Matrices of the No. 337 Series shown on these pages are sold at Class A prices
NOT INCLUDED IN MATRIX LIBRARY AND WILL NOT BE LEASED

The typical matrix case includes five alphabets: roman caps, roman lower case, italic caps, italic lower case and small caps. Narrow characters occupy the top rows, wide characters the bottom rows. Sometimes not every character can be put into its appropriate row and must be cast separately or on a narrow body with a high space "underpin" to support the overhang. This is a 16x17 case.

The Matrix Case

The Matrix Case, with its 225 individual matrices, is practically the heart of the Monotype, and, like the human heart, is vital to the successful use of the machine, though so small that it may be held in the hollow of one's hand.

The arrangement of the separate matrices in the Matrix Case is varied according to the character of the type face it contains: thus the machine is adjusted to the job and it is not necessary to change the job to suit the machine.

The Keyboard Arrangement
As will be seen by the engraving herewith, is arranged according to the universal typewriter layout, which has been proved by years of experiment and practical use to be the fastest arrangement possible, as well as the easiest for the operator.

The Monotype Keyboard is not changed when the Matrix Case arrangement is altered, but is adjusted by an intermediate part known as the keybar. Thus the speed of the operator is not reduced by an unfamiliar arrangement of the keys. This makes it possible for Monotype operators to acquire a very high speed by using the touch system.

Cloister Old Style was one of the early revival typefaces based on Venician Rennaissance faces. Morris Benton based his on Jenson's roman tyye, c. 1897.

Doves (Propietary)

No, you can't order this. Swamp engraved English Monotype style large composition matrices in the original 16 point size. Although not, strictly speaking, a facsimilie of the original, it is almost indistinguishable from it. Due to the requirements of mechanical typesetting, the design had to be tweaked for the Monotype system, which means there are only certain set widths available, as opposed to foundry type wherein any set is possible.

The chart on the back of the case shows the layout of the matrices in their case, and below that and to the left the wedge, to the right the matrix case and in the foreground type produced from the mats.

Not wanting to upset the wonderful story of the Doves matrices and type tipped into the Thames river, the type will not be made available for general use. On our parts it was a proof of concept that large composition matrices could be made on the Benton. Also, we wanted Doves type for ourselves.
Eden Bold (Ludlow)

Roman + Small Caps Composition: 14 Didot (on 16 pt English body)
Kerned Type. The "kern" is the overhanging part of the letter— in this case the tail of the "y" and the head and tail of the "f" character. The ability to cast type with kerns is not possible with regular Linotype or Intertype matrices, and represents one of the fundamentally superior aspects of Monotype and foundry type. The kerns are fragile, having no support underneath them to withstand the impact of letterpress printing. However if there is another character alongside the kerned type the kern is supported by the neighbor's body, as shown above.

Also note the use of a "high space" to the right of the "f" character. This technique should be used whenever there is no supporting character alongside. It is important to make sure the underside of the kern and the top of the adjacent body or high space are clean and free of flashed metal or dirt so that the kern seats nicely and does not get bent upwards, which can result in inking and impression problems as well as increasing the likelihood of breaking the kerned portion off.

Friedlander Initials by Swamp Press

A special engraving project with Incline Press in England. Graham Moss kindly shared images of these initials by Elizabeth Friedlander which were drawn for a book on Churchill. This is the first rendering into hot metal, ever.

Friedlander designed fonts such as *Elizabeth,* but had to flee Nazi persecution and wound up in England, designing books, and eventually ornaments for Monotype.

Friedlander Ititials

Garamond (English Monotype) #156

Released in 1922 and based on Jannon's c. 1620 roman, the italic based on Robert Granjon's c. 1550 cuttings. The "Original Garamond" font introduced at the Paris World's Fair in 1900 started a rush to bring out updated Garamond faces.

The "tower" of the keyboard. By typing the text a paper ribbon similar to a piano roll is punched with the coordinates of the characters in the composition matrix case. The keyboard calculates the spacing mechanically so that justification may be performed, as well as centering, letter-spacing, etc. Fonts can be keyboarded so that they can be cast "automatically" on the comp caster.

Hungry Dutch by Russell Maret

IN A GROUND-BREAKING PROJECT Russell Maret designed this new type face in collaboration with the Type Archive in London and produced the first new Monotype composition face since the 1970's. Although most people thought this was an impossible quest, as the many departments of Monotype that used to be needed to bring a design through the steps of making patterns, engraving punches and then punching and finishing the matrices were long gone, Russell and the Archive pulled feat this off.

12 pt. fonts at $70 (half strength 16A36a) & composition are now available from Swamp Press.

The Thompson foundry-style caster.
Kliluk *by Barbara Henry*

A new typeface designed by Barbara Henry of Harsimus Press. This is an *asemic* font. For those in the know, this alphabet is for an imaginary language. If a viewer thinks the language is real but just one they don't know, the project is a success. Each character is cast on a quad, so it can be printed as 4 different images when set in lines. The images make wonderful ornamental matter as well. So far seven characters have been engraved. In all there will be 32 characters plus their mirror images.

Kliluk

A sampler of 18 pt Asemic Type

by Barbara Henry

$35 • Ten pieces each of characters 1-7 and of mirror images of 1-3, 5 & 6

*My matrices are engraved and of unknown origin. Engraving mats is an alternative to the difficult process of electroplating or the even more arduous process of carving or engraving punches and then striking mats in a punch press. The main difference between engraved mats and mats otherwise produced is that since the engraving tool must be cone-shaped, the casting cavity has a sloped side-wall which means the type cannot fit as tightly side to side as punched mats, for instance, because a punched mat can have a vertical side-wall. In the case of Stencil, however, the fit is loose and the issue of tight fit is moot.

Twist, a boxed set by Sonya Clark

Twist, a hair based font, challenges the cultural supremacy of the Roman alphabet and resists the European dominance inherent in its widespread use.

Twist follows the curl pattern of African hair. It re-centers Africa as the cradle of all humanity and returns us to our roots. Inspired by the curly DNA-filled strands of hair, *Twist* serves as a genetic reminder of our ancestry. In his ground breaking book, Decolonizing the Mind: The Politics of Language in African Literature, Ngũgĩ wa Thiong'o wrote "language as culture is the collective memory bank of a people's experience in history." The seminal text encourages African writers to publish works in any of the thousands of native languages rather than those of the colonizers. Yet, even when an African author follows Ngũgĩ's directive, indigenous languages, the culture held in the words, are relegated to the colonizers' Roman-based script.

Twist was digitally formatted by graphic designer, Bo Peng, *Twist* was named by poet laureate, Rita Dove."

—*Sonya Clark*

Vance Gerry

ENGRAVED FLOWERS

5 each of 16 flowers, 18 pt. $25

A special casting with the help of Whittington Press of ornaments designed by Vance Gerry.

Gerry was raised in Pasadena, California, where he apprenticed at the Castle Press of Grant Dahlstrom as a teenager & caught the letterpress bug. He trained as a commercial artist and attended the Chouinard Art Institute, under the G.I. Bill, where he studied under the renowned animation artist Donald W. Graham.

In 1955 he worked at the Walt Disney Animation Studio as a layout and story sketch artist. He has contributed to films such as *Sleeping Beauty*, *101 Dalmatians*, *Winnie-the-Pooh*, and so on, finishing up with *The Lion King*.

After Disney he returned to his roots as a letterpress printer and from 1967 ran the *Weather Bird Press* in the Los Angeles area. The press moved from Laguna Beach, where it was called the *Peach Pit Press*, to Fallbrook, & finally to Pasadena. He illustrated most of his books with his line drawings, linoleum cuts, and pochoir. He also wrote and printed several books under the pseudonym of Bunston Quayles.

He gave serious thought to designing his own typeface, and acquired typefounding equipment & a Thompson caster. He worked at cutting punhes.Somewhere along the line he did have these ornaments engraved.

Gerry died March 5, 2005 and UCLA holds the *Weather Bird Press Archive, 1966-1992* at the William Andrews Clark Memorial Library in Los Angeles.

These ornaments are available from Swamp Press in the USA and Whittington Press in the UK.

Linotype mats with slugs showing border and type. Note that since the casting is in the form of a slug it cannot be corrected easily. Usually the whole line (slug must be recast. Also, since the mats sit side by side, there can be no kerned characters. Linotype solved this problem by making logotypes, or mats with multiple characters. Intertype and Linotype mats can run on either Intertype or Linotype machines and are virtually identical except for their manufacturers.

Twentieth Century Extrabold #603 aka Futura

Lanston's copy of Futura, based on the design by Paul Renner for Bauer Typefoundry in Germany c. 1927, using the Bauhaus aesthetics. The face was called the "most influential face of its era". Baltotype did the first pirated version "Airport" c. 1943; Sol Hess of Lanston did some versions as well.

Univers is the name of a large sans-serif typeface family designed by Adrian Frutiger and released by his employer Deberny & Peignot in 1957. Frutiger came out of the Swiss Internation Style if typography, mentored by Ernst Keller at the School of Applied Arts in Zurich. Released in 1961 by Monotype.

Univers: NOTE: all sizes are given are in Didot points. The Deberny & Peignot designation is in parens.

Also: 5 Didot Points = 6 Points English; 6D=7; 7D=8; 8D=9; 8.5D=9; 9D=10; 10D=11; 11D=12; 12D=13, 14D=16; 16D=18; 18D=20; 22D=24; 28D=30; 36D=36; 48D=60

SWAMP PRESS

Devanagari Bold #346 (English Monotype)

सन् १८६७ में इंगलैंड में एक नयी मशीन का अधिक सफल माडेल आया। इसमें अभी और उन्नति होनी थी। सब से पहिले अमेरिका के अनुसंधानक टालबर्ट लेन्सटन को इसके बारे में सूझी। उन्होंने इसे छिद्रयुक्त रिबन के कागज में गुंथी एक ठंढी पेंसिल की बड़ी कील से एकहरे अक्षरों को मुद्रित करने की मशीन सोचा था। लेन्स्टन और सुप्रसिद्ध इंजीनियर जान सेल्स बेन्क्राफ्ट द्वारा इसकी उन्नति हुयी। अब यह एकहरे अक्षरों को ठीक गति से बनाने तथा प्रकट करने की मशीन के रूप में बनी और यह वर्त्तमान "मोनोटाइप" मशीनों को पुरखा कही जा सकती है।

Frank Ruehl & Mirjam (Intertype #1804)

Frank-Rühl (or Ruehl) is the ubiquitous Hebrew text font style. There are many
fonts that belong to this style, and all are based on an early 20th-century design
by Raphael Frank. Some of the fonts are actually called Frank-Rühl (or Ruehl)
and some are not.

10 Pt. Frank Ruehl with Mirjam. Font No. 1804   Lower case alphabet

6	7	8	9	0
2	*2*	*2*	*2*	*4*

Spacing Fonts

	Ems	Ens	Thick	Mid	Thin	Hair
1/2 Strength	75	40	100	80	80	40
1/4 Strength	50	30	60	40	40	20
1/8 Strength	25	15	30	20	20	20

Generally: "Thick"= 1/3 em, "Mid"= 1/4 em, "Thin"= 1/5 em, Hair = 2 pts
For larger sizes more set (width) sizes may be added.

We sell spaces and quads by the lb. as well as in fonts priced by the lb.

If you have a case nicely apportioned with spacing, weigh the spacing
and use that as a guide to ordering.

Otherwise, if a case has say 2 caps and 4 lower case, figure on 3 or 4 fonts.

One method to determine how much spacing is required would be to count up
say the lower case "a"s, then divide by the appropriate font strength, to
determine the approximate number of fonts required in your type case.

DIDOT: 15 pt English matches 14 Didot, 30 pt English matches 28 Didot.
        I can supply both sizes of spacing.

For your information, a 1/2 strength spacing font of:

	12 point weighs 0.9 lbs
	14 pt weighs in at 1.2 lbs
	16 pt weighs in at 1 lbs 5.8 oz
	18 pt weighs in at 2.08 lbs
a 1/4 Strength font of	24 pt comes to 2.4 lbs
1/4	36 at 5.3 lbs
1/4	48 at 9 lbs
1/8 Strength	60 pt 6 lbs 4.6 oz
1/8	72 pt at 8 lbs 11 oz

COPPERS & BRASSES we now stock paper "coppers" and "brasses"
12-36 point. $0.40 per card or 3 cards for $1. (24 pieces per card)

Lanston Series Numbers

Numerical listing of Lanston faces. Note: italic fonts add a "1" to the roman designation. Thus Plymouth italic is 601.

MOVABLE TYPE ANATOMY

Bodkin aka Makeready Punch $25

Hardened steel point can be removed & stored in the handle & has a flat so the press platen will not be dented.

This handy tool is used to stab through a make-ready sheet over the tympan (which is then printed) to allow alignment of the sheet plus make-ready under the packing. The hardened tip is short and has a flat, so it will not hit the platen itself. Wild Carrot Letterpress was given this tool many years ago and we had it copied by a machinist, Lou Hebert. Storing the pointed tip inside the handle means it can be pocketed without one getting stabbed by the pointed end. We have never been able to find another example of this tool, and have no idea who made the original or when. All we know is it probably came from England.

Galley Magnets

Manufactured at Swamp Press for Letterpress Things.
Contact John Barrett to order: Letterpressthings@gmail.com

Here's a neat trick: if the magnet is in a tight spot and can't be easily extracted, put a second magnet on top of it to cancel the magnetism, and it lifts off easily. If the magnetism isn't cancelled, rotate the top magnet 180 degrees.
Benton Matrix Engraving

Matrices can be made from your digital files or scannable art.
Logos, ornaments, entire fonts. Faces done recently:
Pilot Black Italic (For the Fine Press Book Association),
Cherokee (in four sizes) (For Speakeasy Press).
Also ornaments, *Pinwheel* by Russell Maret.
ATF Benton number 63

A Swamp Press Book You Must Have:
Ornadem_entia_

- 276 large format pages (8.5x11 inches) packed with thousands of ornament specimens, perfect bound, versus a few hundred pages in the free PDF download.

- Call me old-fashioned, but I myself prefer leafing through a bound book made of actual paper versus scrolling through massive digital files. And no battery or electric outlet necessary!

- Not only are there more ornaments shown, they are shown in all their sizes and arranged so that one can see the ornament's visual potential & glory.

- Ornaments that I have no matrices for are displayed so that you may nudge me into acquiring the means to cast your favorite dingbat for you.

- A great gift for any typophile.

- A bargain at $45.00 postpaid to anywhere in the US of A.

Ornadementia

An almost Compleat Specimen Book
of Hot Metal Borders, Ornaments
& Dingbats of all Kinds at the
Swamp Press Letter Foundry

Tolbert Lanston's Type Bible

• 676 large format pages (8.5x11 inches), and counting, packed with hundreds of full type specimen sheets, many obscure & otherwise unavailable anywhere—even on the web. Perfect bound.
• While you may collect rare-book versions of Lanston's specimen books, at much greater cost, none will be as complete as this edition which combines specimens from multiple versions. • Digitally reproduced using high resolution scans • Essential for designers. A great gift for any typophile.

• A bargain at $65.00 postpaid to anywhere in the US of A.

• Specimens show all point sizes Lanston manufactured, along with alternate characters, ornament pairings, &etc.

• An expanded version of the book type designers and printers used to specify type and show clients what the faces looked like in their various sizes.
• Also shown are technical pages on Monotype equipment and advertising for new faces as well as various promotional material.
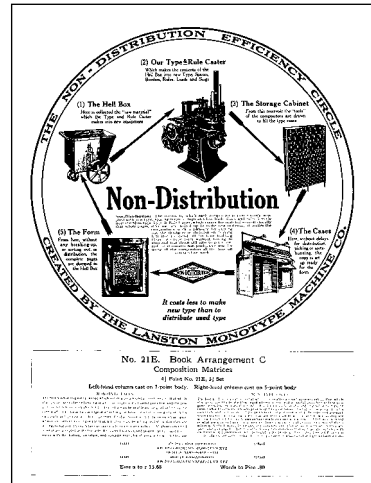

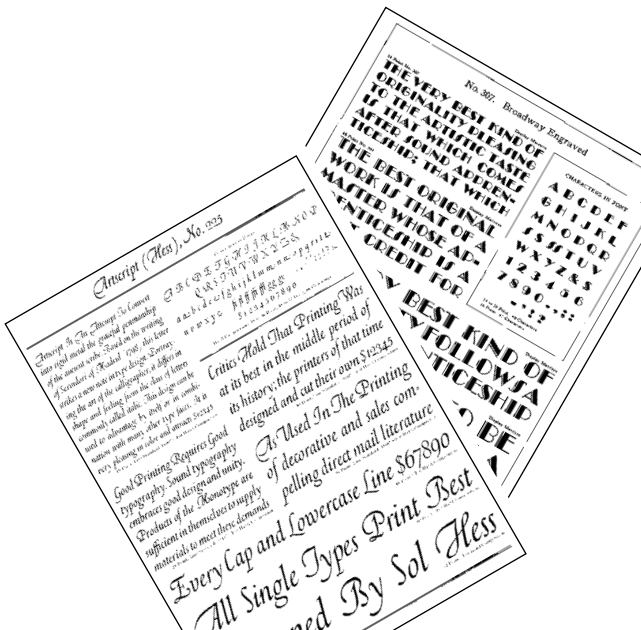

English Monotype Specimen Book
c. 1970
2 VOLUMES COIL BOUND

Under development. Reproduction of what most of us know as the two volume green ring binder set. With permission of Monotype Imaging, the complete set of specimens were scanned and bound. While a reproduction can never replace the original, this is a handy copy suitable for every day use in the shop or design studio which leaves your precious original pristine.

Since the original sets varied due to assembly at different times, this volume contains all the green binder type specimens from the 1970's era. Price TBD.

ENGLISH MONOTYPE SPECIMEN BOOK
# THE EARLY DAYS
2 VOLUMES COIL BOUND

Under development. Reproduction of specimens from the beginnings of English Monotype up to 1970. Scans of many rare and discontinued faces With permission of Monotype Imaging, the complete set of specimens were scanned. Includes obscure faces such as Frakturs which were never included in the original specimen books and were available by special request only. While a reproduction can never replace the originals, this is a handy copy suitable for every day use in the shop or design studio which leaves your precious originals pristine, if you are lucky enough to have them.

Since the original sets varied due to assembly at different times, and the many revisions Monotype made, this volume contains a gathering representing all the pre-1970's era originals. Price TBD.

English Monotype Specimen Book of Rules Borders Figures Etc
(c. 1970)
Reproduction of specimens from English Monotype circa 1970; probably the last collection of specimens issued. With permission of Monotype Imaging, the set of specimens were scanned and bound. Includes ornamental material not available in earlier Monotype specimen books.

While a reproduction can never replace the originals, this is a handy copy suitable for every day use in the shop or design studio which leaves your precious originals pristine, if you are lucky enough to have them.

Since the original sets varied due to assembly at different times, and the many revisions Monotype made, this volume more complete than any you are likely to find, anywhere. Many thanks to Pat Reagh for allowing me to scan his copy. $45 postpaid.

"Gold Box" Unique Ornaments &etc.
